Re-cycled
plastic.**

Because we care about green.

Greener is the line of vases made entirely of recycled plastic to meet the needs for a cleaner planet and offer nature lovers the opportunity to be truly sustainable.

The challenge of double sustainability.

With Greener, you're "greener" twice. To re-use the precious resource of plastic and become part of a community of those who respect the environment and adopt solutions to maintain and protect it, cultivating the good of the world.

Plastic has a good and a "greener" soul.

For us, being "greener" means giving up producing new plastic to use what is already available to us. Because plastic is one of the most resistant and durable materials in the world and bottles, packaging, bags, stoppers and many other products can become new and useful objects that are beautiful and high-performing.

The culture of recycling is the only base on which the seeds of a better future can grow. Because plastic is worth much more than it seems, and when its life-cycle is respected and exploited for its real potential, it turns from waste into raw material.

For those who are "greener" or who want to be.

Never before have people begun to become aware of the need for a radical change in habits, behaviour and everyday actions. The urgency to act is increasingly-shared as is the search for sustainable solutions.

Which is why Greener was born, to promote a greener planet starting from our cities, neighbourhoods and homes, and to close the circle of a possible circular economy while respecting environmental criteria.

The seed of a better future.

The Greener collection is the result of a love for the environment and bears the mark of this origin. The shades of the products may appear different due to the different colouring of the recycled materials.

This aspect highlights the intrinsic value of every pot, which also becomes an item to chose because of its appreciable uniqueness.

Antishock

The virtuous cycle of recycling.

Giving plastic a second life is our commitment to the environment and to all living things.

A promise that does not end in a pot but favours the development of a dynamic, circular and potentially-infinite economy.

What's in a pot?

In a Greener vase, you'll find:

- . the promise of a better world
- . the chance to do your part
- . the true value of plastic
- . a culture to share

Use your pot as long as possible and when you no longer need it, remember to dispose of by recycling it properly. So it can be transformed into a new item.

And you, what will you put in your pot?

87,1% 
of Italians recycle plastics.

1,8 kg VS 18 kg

In 1998, just 1.8 kg per inhabitant was collected whereas today we have reached about 20 kg per person.

Plastic takes over 400 years to degrade, so most of the plastic ever produced still exists in some form.

Only 12% has been incinerated.

Only 44.5% of plastic is transformed into new objects, while 43% ends up in waste-to-energy plants for energy production.

It takes about 2 kg of oil to obtain 1 kg of PET plastic.

Every year, about 8 million tons of plastic end up in the sea, contributing to 80% of the total pollution of the seas and oceans.

To meet the annual requirement of 6 billion 1.5 l bottles, over 450,000 tonnes of oil are needed, and over 1.2 million tonnes of CO2 are released into the atmosphere.

After steel and concrete, plastic is the third most widespread human material on Earth.
